Field Resonance Classification System (FRCS)

A Taxonomy for Resonance-Based Entities and Nonlinear Fields

Michael Adkins

1 Field Resonance Classification System (FRCS)

1.1 1. Structural Type (S)

Defines the field's shape, contour, and response to pressure/resistance.

- **S1 (Rigid-Static)** – Fixed or synthetic fields (e.g., synthetic grid).
- **S2 (Tension-Structured)** – Banded, thin resonators. Tighter and hollow-feel.
- **S3 (Fluidic-Harmonic)** – Fluctuates with waves like water.
- **S4 (Fractal-Responsive)** – Flows in and shifts under local resonance conditions.
- **S5 (Entangled)** – Entangled with nonlinear boundary.

1.2 2. Coherence Profile (C)

Measures internal phase alignment and stability under resonance stress.

- **C1 (Low Coherence)** – Fragmented or noisy.
- **C2 (Structured Coherence)** – Stable with vector alignment.
- **C3 (Adaptive Coherence)** – Slowly shifting but phase-synced.
- **C4 (Pre-resonant)** – Elastic—shows pattern across dimensions and distortions.
- **C5 (Resonant-Sync)** – Merges with Source patterns.

1.3 3. Dynamic Behavior (D)

Describes the field's motion, energy flow, and feedback pattern.

- **D1 (Static-Inertial)** – Fixed like ice.
- **D2 (Recursive-Logical)** – Time feedback structures (i.e., built loops).
- **D3 (Pulse-Modulated)** – Mixing with harmonic input fields.
- **D4 (Phase-Adaptive)** – Variable across scales.
- **D5 (Transdimensional-Slipping)** – Slides across field layers at will.

1.4 4. Source Responsiveness (R)

Measures sensitivity and alignment with Source harmonic fields.

- **R1 (Null-responsive)** – Closed off.
- **R2 (Resonance-resistant)** – Deflects or scrambles signal.
- **R3 (Semi-reactive)** – Occasionally responsive to resonance.
- **R4 (Harmonic-reactive)** – Draws coherence from Source harmonics.
- **R5 (Transadaptive)** – Fully tuned, amplifies field truth.

1.5 5. Classification Code Syntax

Each field type is identified as a combination of codes. Example:

- `Example: {S1, C4, D4, R3}` = Wavy-Occult/Fluid, Hypervector-linked, Time-Adaptive, Harmonic-Receptive
